I've been cooking since my mom taught me in 8th grade. I like to cook for my family and sometimes my friends. I cook breakfast the most because my parents don't like to cook in the morning and I love breakfast time the most.

The secret to being a good cook?
Stay focused on the food and the food only.
I love music. It calms me down.
Before the quarantine I would usually go to bed at 10:00 PM or earlier. Now I usually stay up and then I sleep all day. I sleep until I wake up which is around 1-2 PM. I don’t really dream, nor do I really remember my dreams. My favorite sleeping environment is my bedroom, but only when I’m alone. The person I’m in the room with is kind of loud but I’m a really good sleeper. I can sleep through a party. But I love it quiet and a little cold in the room.
Watching movies has helped me relieve stress because it just helps me get through every day that I'm quarantined.

My favorite movie genres are comedy, action, and thrillers. My favorite actress is Taraji P. Henson and my favorite actor is Marlon Wayans.
Ever since the age of 3 I’ve always loved and played basketball. And I grew up being exposed to the game early - watching my dad and uncles so in tuned with NBA games, I knew from that point on basketball was my first love. Initially though my older cousin of 5 years inspired me to play basketball seriously. And I pledged to always take him up on his word. However when I have a possibility that kids, if there’s a possibility that they don’t love the game, then that’s fine. I would never force that on them. They don’t have to love the game, unless they actually love the game. Love comes naturally not forced. Especially with a sport as valuable as Basketball. Which is why I’ve never played any other sport. Basketball just hits home with me and always will.
I love math. To be completely honest I find all math easy if you pay attention and ask questions you’ll get it. But no math is hard to me. Math is easier to me than reading because it’s just numbers and sometimes letters. My math grades are always an “A” average. I see my math skills being important in the future so I can be able to calculate all my bills and when I start doing taxes.
Asia Morgan

When I play monopoly I typically lose, because I don’t know the game that well. My Favorite board piece is the dog or car because they are really things that can move in real life.

I often paint with my mother and sister and it can be very calming. My favorite subject to paint would be about African Art, Anime, and Marvel characters. I have been painting for 2 years. My Dad is an awesome artist and often draws the image on the canvas and I paint it. However one of my favorite artists is Kehinde Wiley. He is a Nigerian-American portrait painter based in New York City, who is known for his highly naturalistic paintings of Black people. I do not have painting aspirations for a career, however it is a great hobby and I really like doing it.
During my time in quarantine what usually relaxes me is playing video games. I've played many video games in my life. I've been playing video games for as long as I can remember. Usually, I play games by myself on my Playstation. It's more fun that way in my opinion. My favorite game is The Last Of Us. I've had that game for at least 7 years now. I've played the game at least 3 times. In the Last Of Us, there aren't really levels to achieve. As a person who plays video games, I've always dreamed of making my own game. If I were to ever make a game I would make a game about a superhero story. I've always had an idea about a superhero story.
For a while now, before COVID, I was interested in doing nails; my Nanna actually inspired me to try this nail tech business... it looked interesting to me and I believed that I could do pretty well with it. The skill of doing nails takes practice...LONG practice; it requires you to have patience and dedication to learning the skill. You won’t be able to learn it in one day or overnight; it’s a challenging task. Everyone has something that kind of grows on them over time, and mine was doing nails. I would say that I realized I liked doing nails when I first tried to do my own which was 4 months ago. Doing nails is something I enjoy doing and I would love to continue and take it further in my future. No, I wouldn’t say this is a “career ambition” for me per se, but a little side job besides being a pediatrician, which is my career ambition.
I sketch as often as I can, meaning all the time. This character named Sonic and my mom made me want to start sketching. It can take me from 45 minutes to 2 entire hours to complete a sketch.
